

# Two-Way Radio

**Effective Wireless Solutions  
For Business & Industry**

Do you speak  
**digital?**

**ON-SITE, LICENCE FREE, NO CALL COSTS**

Outstanding clear audio quality right to the edge of coverage and enhanced battery life aren't the only advantages of Motorola digital on-site two-way radios. No annual radio license is required to operate these highly featured, lightweight but durable business radios.

# Do you speak digital?

And for enhanced talk security (no eavesdropping), Motorola has added Frequency Hopping Spread Spectrum (FHSS) with 50 non-overlapping groups which means

you can have multiple group communications occurring simultaneously on the same channel (unlike current PMR446 or PMR analogue radios).

It all adds up to a superb combination of features for your convenience, management, and productivity all at an extraordinary value.

- ◆ Page 8—How to contact us

Unlike analogue radios, each Motorola DTR radio has its own unique 11 digit identification, bringing you new calling options making it far easier for your team to communicate with each other.

## DIGITAL ONE-TO-ONE CALLING

- **Private individual call** - allows you to call and talk privately with a specific user's radio. A private-call recipient can receive an alert—either an audible or vibrating signal. And the recipient's radio displays the caller's ID.

## DIGITAL ONE-TO-MANY CALLING

- **Public group call**—all other DTR Series™ radios on the same group ID and channel hear communications, similar to analogue radio operation.
- **Private group call**—enables you to program DTR Series™ radios to communicate with specific sets of group members. Caller ID displays group identification.
- **Call forwarding to other radio IDs**—notify others that you're unavailable and allow them to speak with another contact for assistance.
- **Transmit ID**—receiving radios will display the radio ID of the transmitting unit and, if listed in the receiving radio's contact list, the transmitting unit's radio name.
- **Short message service (SMS) text messaging**—with ten preset messages for example, "I'll call you back in 5 minutes," and support for keyed-in custom messages to meet more specific needs.
- **Scroll list**—can display frequently used group and private IDs for easiest access. You can also view a recent-calls list, showing the source and target of the last 10 transmissions with time and date information
